Welcome to Pulp

International Paper's High Quality Pulp Give Our Customers' Products An Edge

Pulp is used in the manufacture of printing, writing and specialty papers, as well as higher strength technical and converting grades. Pulp is also converted into diapers, sanitary napkins and incontinence pads. Some pulps are specially engineered for the economical production of cellulose acetate, rayon and lyocell products.

For over 100 years we have been producing pulp in a number of mills in the United States and in recent years around the world. Our vast experience and technological leadership assure our customers that the pulp we provide is the best available anywhere in the world.

International Paper markets three types of pulp:

Fluff Pulp

Fluff Pulp is used extensively for diapers, sanitary napkins and incontinence pads. Our pulp is manufactured in roll form from fully bleached southern softwood sulfate pulp. It provides very high absorbency and excellent pad integrity. Brand name: Supersoft®.

Dissolving Pulp

Dissolving Pulp is used for the economical production of cellulose acetate, rayon and lyocell products. Our grades are produced from fully bleached southern mixed hardwood sulfate pulp and are highly purified. Brand names: Acetkraft®, Estercell®, Solvekraft™, Viscokraft®, Viscocell®.

Paper Pulp

Paper Pulp is used for the manufacture of printing, writing and specialty papers and for higher strength technical and converting grades of paper. Our grades are made from bleached southern hardwood sulfate pulp and

bleached southern softwood sulfate pulp. Brand names:
Astracel™, Riverdale Hardwood, Supercell AO2®,
Albacel®, International Pine®, Riverdale Softwood,
Neutrancel®.
